

Causal Inference and ML: Beyond Correlation in Sports Data

Estimating Heterogeneous Effects on Marathon Data

Core Research Questions

Core Research Questions

1. Prediction

Primary Objective: Identify the core drivers of **Actual Finish Time**.

Sub-Points:

- Evaluate non-linear interaction effects.
- Benchmark Linear vs. Tree Ensembles
- Identify Causal Relationships

2. Risk Optimization

Primary Objective: Isolate training triggers for **Injury Counts**.

Sub-Points:

- Model count metrics via Poisson/NB approaches.
- Locate systemic thresholds in mileage and missing rest days.

3. Causal Inference

Primary Objective: Establish if mileage *causes* speed.

Sub-Points:

- Control for selection bias and baseline fitness (*Age, VO2 Max, etc*).

Table 1: Summary Statistics of Runner Dataset

Metric	count	unique	top	freq	mean	std	min	25%	50%	75%	max
runner_id	80000	80000	R057981	1	NaN	NaN	NaN	NaN	NaN	NaN	NaN
age	80000.0	NaN	NaN	NaN	41.538412	13.848164	18.0	30.0	42.0	54.0	65.0
gender	80000	3	Female	38577	NaN	NaN	NaN	NaN	NaN	NaN	NaN
